

IN THE CLAIMS

1. (Currently amended) A computerized method for displaying images comprising:
accessing a plurality of presentation images having inconsistent presentation attributes;
arranging the presentation images according to at least one characteristic; and
organizing the presentation images in a visual presentation, wherein organizing includes automatically modifying the inconsistent presentation attributes of the plurality of presentation images to have consistent presentation attributes.
2. (Previously presented) The computerized method of claim 1 further comprising:
selecting the characteristic from the group consisting of a distance, a perspective, a magnification, and an angle.
3. (Previously presented) The computerized method of claim 1, wherein modifying the inconsistent presentation attributes of the plurality of presentation images includes modifying the inconsistent presentation attributes from the group consisting of a size, a color, and an exposure.
4. (Original) The computerized method of claim 1 further comprising:
accessing an address for a location.
5. (Original) The computerized method of claim 1 further comprising:
accessing location coordinates for a location.

6. (Original) The computerized method of claim 1 further comprising:
receiving compensation from a client.
7. (Previously presented) The computerized method of claim 1 further comprising:
accessing additional information, wherein the additional information is selected by a
computer user and affect the appearance of the visual presentation.
8. (Previously presented) The computerized method of claim 1 wherein accessing the
plurality of presentation images comprises:
uploading the plurality of presentation images from a client.
9. (Previously presented) The computerized method of claim 1 wherein accessing the
plurality of presentation images comprises:
loading the plurality of presentation images from a database.
10. (Previously presented) The computerized method of claim 1 wherein accessing the
plurality of presentation images comprises:
uploading at least one presentation image from a client; and
loading at least one presentation image from a database.
11. (Previously presented) The computerized method of claim 1 wherein accessing the
plurality of presentation images comprises:
loading at least one presentation image from a computer-readable medium.

12. (Original) The computerized method of claim 1 further comprising:
sending the visual presentation to a client.
13. (Original) The computerized method of claim 1 further comprising:
saving the visual presentation on a computer-readable medium.
14. (Currently amended) A computerized system comprising:
a processing unit;
a memory coupled to the processing unit through a system bus;
a computer-readable medium coupled to the processing unit through the system bus; and
a program executed from the computer-readable medium by the processing unit, wherein
the program causes the processing unit to access a plurality of presentation images having
inconsistent presentation attributes, arrange the presentation images according to at least one
characteristic, and organize the presentation images in a visual presentation, wherein to organize
the presentation images includes to automatically modify the inconsistent presentation attributes
of the plurality of presentation images to have consistent presentation attributes.
15. (Previously presented) The computerized system of claim 14 wherein the program further
causes the processing unit to select the characteristic from the group consisting of a distance, a
perspective, a magnification, and an angle.
16. (Previously presented) The computerized system of claim 14 wherein the program further
causes the processing unit to modify the inconsistent attributes of the plurality of presentation

images including modifying the inconsistent presentation attributes from the group consisting of a size, a color, and an exposure.

17. (Original) The computerized system of claim 14 wherein the program further causes the processing unit to access an address for a location.

18. (Original) The computerized system of claim 14 wherein the program further causes the processing unit to access location coordinates for a location.

19. (Original) The computerized system of claim 14 wherein the program further causes the processing unit to receive compensation from a client.

20. (Previously presented) The computerized system of claim 14 wherein the program further causes the processing unit to access additional information, wherein the additional information is selected by the user and affect the appearance of the visual presentation.

21. (Original) The computerized system of claim 14 wherein the program further causes the processing unit to send the visual presentation to a client.

22. (Original) The computerized system of claim 14 wherein the program further causes the processing unit to save the visual presentation on a computer-readable medium.

23. (Currently amended) A first computer-readable medium having computer-executable instructions to cause a processor to create ~~for creating~~ a visual presentation comprising:

accessing a plurality of presentation images having inconsistent presentation attributes;
arranging the presentation images according to at least one characteristic; and
organizing the presentation images in a visual presentation, wherein organizing includes automatically modifying the inconsistent presentation attributes of the plurality of presentation images to have consistent presentation attributes.

24. (Previously presented) The first computer-readable medium of claim 23 having computer-executable instructions further comprising:

selecting the characteristic from the group consisting of a distance, a perspective, a magnification, and an angle.

25. (Previously presented) The first computer-readable medium of claim 23, wherein modifying the inconsistent presentation attributes of the plurality of presentation images includes modifying the inconsistent presentation attributes from the group consisting of a size, a color, and an exposure.

26. (Original) The first computer-readable medium of claim 23 having computer-executable instructions further comprising:

accessing an address for a location.

27. (Original) The first computer-readable medium of claim 23 having computer-executable instructions further comprising:

accessing location coordinates for a location.

28. (Original) The first computer-readable medium of claim 23 having computer-executable instructions further comprising:

receiving compensation from a client.

29. (Previously presented) The first computer-readable medium of claim 23 having computer-executable instructions further comprising:

accessing additional information, wherein the additional information is viewing preferences are selected by a computer user and affect the appearance of the visual presentation.

30. (Original) The first computer-readable medium of claim 23 having computer-executable instructions further comprising:

uploading a plurality of presentation images from a client.

31. (Original) The first computer-readable medium of claim 23 having computer-executable instructions further comprising:

loading a plurality of presentation images from a database.

32. (Original) The first computer-readable medium of claim 23 having computer-executable instructions further comprising:

uploading at least one presentation image from a client; and

loading at least one presentation image from a database.

33. (Original) The first computer-readable medium of claim 23 having computer-executable instructions further comprising:

loading at least one presentation image from a second computer-readable medium.

34. (Original) The first computer-readable medium of claim 23 having computer-executable instructions further comprising:

sending the visual presentation to a client.

35. (Original) The first computer-readable medium of claim 23 having computer-executable instructions further comprising:

saving the visual presentation on a second computer-readable medium.

36. (Withdrawn) A method for receiving compensation for use of an imaging service by a computer user comprising:

determining an amount of compensation based upon use of the imaging service by the computer user;

sending a request for payment of the amount of compensation to the computer user; and
receiving the amount of compensation.

37. (Withdrawn) The method of claim 36 wherein use of the imaging service comprises:

accessing the imaging service;
sending information to the imaging service; and
downloading a visual presentation.

38. (Currently amended) A computerized system comprising:

means for accessing a plurality of presentation images having inconsistent presentation attributes;

means for arranging the presentation images according to at least one characteristic; and

means for organizing the presentation images in a visual presentation, wherein organizing includes automatically modifying the inconsistent presentation attributes of the plurality of presentation images to have consistent presentation attributes.

39. (Previously presented) The computerized system of claim 38 further comprising:

means for selecting the characteristic from the group consisting of a distance, a perspective, a magnification, and an angle.

40. (Previously presented) The computerized system of claim 38 further comprising:

means for modifying at least one of the inconsistent presentation attributes of the plurality of presentation images.

41. (Original) The computerized system of claim 38, further comprising:

means for receiving compensation from a client.
